

CLAIMS

1. A system for controlling access to procedural information comprising an internet website having a data entry means to enable entry of data relating to a client or an entity and authentication means to verify an ID access code for each client, a memory means to store data relating to each client including each client's ID access code, data on a plurality of procedures, data relating to each entity associated with performing the procedures and a monitoring means to monitor access to any data on one or more of the procedures by each client and to store in the memory means data relating to data accessed by each client.
2. A system as claimed in claim 1 including one or more questionnaires associated with each procedure.
3. The system as claimed in claim 2 wherein the memory means stores any questionnaires completed by a client.
4. The system as claimed in claim 1 wherein the memory means stores an entity ID code which ID code is required by the entity to access data relating to any of its clients.
5. The system as claimed in claim 4 wherein each client enters an ID access code received from an entity.
6. The system as claimed in claim 1 wherein the data entry means is adapted to receive data from each entity relating to a client and store this in the memory means.
7. A system as claimed in claim 1 including a consent means for indicating consent to a procedure by a client, which consent means is adapted to be stored by the memory means.
8. The system as claimed in claim 7 wherein the consent means comprises a consent form signed by the client.
9. The system as claimed in claim 8 wherein

- 23 -

the website includes an indication means for indicating if a consent means is not stored for any client.

10. The system as claimed in claim 9 including an indication if a questionnaire associated with a
5 procedure accessed by a client is not completed.

11. The system as claimed in claim 10 wherein the website is adapted to send an email to an entity highlighting any indication associated with a client stored in a client's file of the memory means.

10 12. The system as claimed in claim 11 wherein the website is adapted to send any reminders to the entity regarding a questionnaire which is incomplete and a consent form which has not been received.

13. An internet website having a data base
15 containing information on a plurality of procedures and a plurality of questionnaires respectively relating to a different procedure, a data entry means enabling entry of particulars relating to a prospective client accessing the website, an authentication means for verifying an ID code
20 for the client, transmitter means for transmitting particulars of a client to an entity associated with performing the procedure and for transmitting one or more questionnaires completed by the client to the entity and memory means for recording data including particulars of
25 the client, the ID code of the client, information about the or each procedure stored on the data base and viewed by the client and one or more questionnaires completed by the client, whereby a record is kept of each client and the information the client accessed at the website
30 including any questionnaires completed by the client after the procedure has been performed by the entity.

14. The internet website as claimed in claim 13 wherein the procedure relates to a medical procedure.

15. The internet website as claimed in claim 14
35 wherein the information stored in the database includes information about procedures associated with any service provided to a client in the field to which the service

- 24 -

relates.

16. The internet website as claimed in claim 15 wherein information is stored and retrievable from the database for viewing as information pages.

5 17. The system as claimed in claim 2 including a controlling means for prompting a client to complete the or each questionnaire.

10 18. The system as claimed in claim 17 including a disclaimer means for presenting a disclaimer relating to the procedure information viewed by the client before any information regarding the procedure is presented for viewing.

15 19. The system as claimed in claim 18 wherein the disclaimer includes an acknowledgement which must be authenticated by the client before information relating to a procedure can be presented for viewing by the client.

20 20. The system as claimed in claim 19 wherein the questionnaire includes questions relating to information in the information pages viewed by the client.

21. The system as claimed in claim 20 wherein the website includes a management means for storing data relating to management of an entities business.

25 22. The system as claimed in claim 21 wherein the management means is adapted to produce periodic reports on data accessed in the management means by the entity.

23. A system for controlling access to procedural information substantially as hereinbefore described with reference to the accompanying drawings.
